Job Description

Your mission

You will play an important role in a dynamic and passionate team, collaborating on a variety of projects of all sizes and scopes in the environment, renewable energies, hydroelectricity, transportation, materials, buildings and climate change markets. Boldness, innovation and collaboration are an integral part of our daily operations.

Englobe - Who we are

At Englobe, our rigor is matched by sincere care for our colleagues, our customers, our communities, and the environment. We are committed to making a real difference, one project at a time, and to having a positive, lasting impact. We approach our work with fresh perspectives, relying on collaboration and a diversity of voices. With an entrepreneurial spirit, we empower our customers and communities with boldness and optimism. We are determined to leave a lasting legacy for generations to come.
Does this sound like the right fit for you? Learn more about the role !

Your main responsibilities

- Apply and promote Englobe's health and safety rules and guidelines and actively participate in all aspects of the health and safety program;
- Manage contaminated sites projects, including Phase I and Phase II Environmental Site Assessments (ESAs), remediation programs, risk management initiatives, and environmental monitoring programs;
- Lead project delivery by managing scope, schedule, budget, quality, resources, and client expectations;
- Plan, coordinate, and oversee field investigations involving soil, groundwater, surface water, sediment, and soil vapour assessments;
- Analyze and interpret environmental data, laboratory results, field observations, and applicable regulatory criteria to support technical decision-making;
- Prepare, review, and approve technical reports, proposals, work plans, cost estimates, remedial action plans, monitoring reports, and regulatory submissions;
- Provide senior technical expertise and quality review for contaminated sites assessments, remediation programs, and risk-based management strategies;
- Coordinate remediation activities, including contractor oversight, construction monitoring, confirmatory sampling, project documentation, and final reporting;

- Build and maintain strong relationships with clients, regulators, subcontractors, and internal multidisciplinary teams to ensure successful project outcomes;
- Support business development initiatives through proposal preparation, client relationship management, strategic planning, and identification of new project opportunities.

What makes you unique

- University degree in Environmental Engineering, Geology, Hydrogeology, Environmental Science, Applied Science, or a related discipline;
- Minimum 8–10 years of progressive experience in environmental consulting, with a strong focus on contaminated sites assessment and remediation projects;
- Professional designation or eligibility for registration as a Professional Engineer (P.Eng.), Professional Geoscientist (P.Geo.), or other relevant professional accreditation;
- Demonstrated experience managing environmental projects, including project scope, budgets, schedules, subcontractors, deliverables, and client communications;
- Strong technical knowledge of Phase I and Phase II ESAs, remediation technologies, environmental monitoring programs, and contaminated sites management practices;
- Proven experience interpreting soil, groundwater, surface water, sediment, and vapour investigation data;
- Thorough understanding of provincial, federal, and municipal environmental regulations, guidance documents, and contaminated sites frameworks, preferably within Atlantic Canada;
- Experience preparing and reviewing technical reports, proposals, work plans, cost estimates, and regulatory submissions;
- Excellent communication, interpersonal, and relationship-building skills, with the ability to effectively communicate technical information to diverse audiences;
- Strong leadership, organizational, and problem-solving abilities, with experience mentoring and developing junior and intermediate environmental professionals.

What makes Englobe unique

At Englobe, you'll have the opportunity to work on a variety of projects of every size and scope. You'll work in an organization that values you and your experience, and allows you to grow. From day one, you'll enjoy the following benefits:

- Real flexibility;
- Multiple opportunities for professional growth, mentoring and skills development;
- Access to a free telehealth service;
- Flexible schedules and the ability to compress your work hours;
- A hybrid work arrangement;
- A full range of benefits (including cost-sharing group insurance and a group RRSP);
- A confidential employee assistance program for you and your family.
